Example Labs

Audit run-0001 · 2026-10-29 14:00 UTC

83% passed after review: 5 PASS · 1 FAIL · 0 NEEDS REVIEW
as the audit decided: 3 PASS · 2 FAIL · 1 NEEDS REVIEW (50%)

AWS	region us-east-1 (account not read: no rule in this run reads AWS)
GitHub	example-labs/website (branch main)
Policy documents	policies/examples/compliant
Audit ran	2026-10-29 14:00 UTC to 2026-10-29 14:00 UTC
Rules	6 assessed of 6 in the rulebook (full audit)
Reviews counted	every review up to #3: 2 result(s) reviewed, 2 changed
AI	openai/gpt-6-luna: 2 call(s), 0 from earlier answers, cost $0.0003
Evidence	verified: 21 files match their SHA-256 hashes (see the appendix)
Tool at audit time	ComplianceLens 0.6.0.dev0, commit `000000000000`
This report	run-0001-r3 · report format 1 · ComplianceLens 0.6.0.dev0 · made 2026-10-29 15:00 UTC

> This report supports an auditor's work; it is not a compliance sign-off. Results judged by an AI name the model that judged them. Human reviews are shown separately, with who made them and when, and never replace the audit's own result.

Summary

Rule	Severity	Result after review	Audit said	Judged by	Machine confidence
AWS-02 Every IAM user with a console password has MFA	high	FAIL	FAIL	code check on API data	high
AWS-05 Every S3 bucket blocks public access	high	PASS	PASS	code check on API data	high
GH-01 main branch requires at least 1 review	medium	PASS	PASS	code check on API data	high

Rule	Severity	Result after review	Audit said	Judged by	Machine confidence
HR-01 Every account belongs to an active employee	low	PASS (changed by review)	FAIL	code check on API data	high
DOC-01 Password policy requires 12+ characters	medium	PASS (changed by review)	NEEDS REVIEW	AI read a policy document	low
GH-07 Members cannot delete or transfer repositories	medium	PASS	PASS	AI read a screenshot	high

Findings, failures first

FAIL AWS-02 Every IAM user with a console password has MFA

Severity high · AWS · judged by code check on API data · machine confidence high · checked 2026-10-29 14:00 UTC

Why: count = 1 (expected == 0) users: ['intern-bob']

```
{
  "count": 1,
  "users": [
    "intern-bob"
  ]
}
```

Evidence: AWS-02.json

Captured 2026-10-29 14:00 UTC · https://us-east-1.console.aws.amazon.com/iam/home#/users · AWS-02.png
SHA-256 `b18436f235f4915489ae4f4ad9f8129241644395e3171b25d6e975ad88e87653`

Suggested fix: Assign an MFA device to each user named, or remove their console password.

PASS AWS-05 Every S3 bucket blocks public access

Severity high · AWS · judged by code check on API data · machine confidence high · checked 2026-10-29 14:00 UTC

Why: buckets_fully_blocked: all 2 true

```
{
  "buckets_fully_blocked": {
    "example-logs": true,
    "example-site": true
  }
}
```

Evidence: AWS-05.json

Shows the screenshot bucket only; the API checked every bucket. · Captured 2026-10-29 14:00 UTC · https://s3.console.aws.amazon.com/s3/buckets/example-logs · AWS-05.png SHA-256 `7bb34915ff780f4915b5e8bf82077f27b0132e290edb9d3c7fcf24b3c89a7beb`

PASS GH-01 main branch requires at least 1 review

Severity medium · GitHub · judged by code check on API data · machine confidence high · checked 2026-10-29 14:00 UTC

Why: required_approving_review_count = 1 (expected >= 1)

```
{
  "required_approving_review_count": 1
}
```

Evidence: GH-01.json

No screenshot: GitHub login expired (the page went to sign-in). The result above does not depend on it.

PASS DOC-01 Password policy requires 12+ characters

Severity medium · Policy documents · judged by AI read a policy document · machine confidence low · checked 2026-10-29 14:00 UTC

Changed by human review: the audit said NEEDS REVIEW; the latest review says PASS (see Human reviews).

Why: the AI could not decide: The model's reason for UNSURE.

```
{
  "folder": "policies/examples/compliant",
  "media_type": "application/pdf",
  "path": "password-policy.pdf",
  "size": 1823,
  "status": "ok"
}
```

Evidence: DOC-01.json

AI judgement · openai/gpt-6-luna · NEEDS REVIEW (unsure, low confidence)
the AI could not decide: The model's reason for UNSURE.
cost $0.0001

Suggested fix: Require at least 12 characters for every password, with no exceptions.

PASS GH-07 Members cannot delete or transfer repositories

Severity medium · GitHub · judged by AI read a screenshot · machine confidence high · checked 2026-10-29 14:00 UTC

Why: The model's reason for PASS.

AI judgement · openai/gpt-6-luna · PASS (accepted, high confidence)
The model's reason for PASS.
Quote: “Allow members to delete or transfer repositories”
Read: Not ticked
cost $0.0001

Captured 2026-10-29 14:00 UTC · https://github.com/organizations/example-labs/settings/member_privileges · GH-07.png SHA-256 `eff3ca1fffb83f21179a344d1631a94076e807d6ceba0f51b9ae82357ffa8c0d`

PASS HR-01 Every account belongs to an active employee

Severity low · HR · judged by code check on API data · machine confidence high · checked 2026-10-29 14:00 UTC

Changed by human review: the audit said FAIL; the latest review says PASS (see Human reviews).

Why: accounts without an active employee: aws ['old-intern'], github []

```
{
  "unmatched_aws": [
    "old-intern"
  ],
  "unmatched_github": []
}
```

Evidence: HR-01.json

Suggested fix: Remove the account of anyone who has left, or list a service account.

Human reviews

A review never edits the audit's result: it is added beside it. The latest review of a result is the one in force. These are people's decisions, separate from the machine's confidence.

HR-01 Every account belongs to an active employee

The audit said FAIL; in force now: PASS

When (UTC)	Reviewer	Decision	Note
2026-10-29 14:12 UTC	auditor	PASS **in force**	old-intern is a contractor's service login kept.

DOC-01 Password policy requires 12+ characters

The audit said NEEDS REVIEW; in force now: PASS

When (UTC)	Reviewer	Decision	Note
2026-10-29 14:05 UTC	auditor	NEEDS REVIEW	Asked the policy owner which length applies.
2026-10-29 14:09 UTC	auditor	PASS **in force**	The owner confirmed 14 characters; page 2 says so.

Appendix: the evidence and how to check it

Manifest SHA-256

	`bcf0e1d65a9cb755179fc04e2a9e3461ae6d4041563d864fe591f336cc7e5f20` (also recorded in the results database)
Rulebook SHA-256	`76b842a21578641d5c78247203e9189b553c7c2cda4238d6bfb2a3cda298e6b6`
Run context SHA-256	`45c5df07ec5de5824edab7cc9223f542e545c33e0aca65289247134bedb1bf45`
Rule definitions	as the audit used them, from run-context.json

How to check it

1. With ComplianceLens: `python audit.py verify run-0001` re-hashes every file and compares it with the manifest and the database.
2. By hand: in the run's evidence folder, `shasum -a 256 FILE` must print the hash in the table below.

The hashes of this report's own files are in its run-0001-r3.export.json file. They describe the report, not the evidence.

File	Bytes	SHA-256
rulebook.yaml	2144	`76b842a21578641d5c78247203e9189b553c7c2cda4238d6bfb2a3cda298e6b6`
