Example Labs Password Policy

Version 2.1. Owner: Security team. Applies to every employee and contractor.
This is a made-up policy written to test ComplianceLens.

1. Purpose

This policy sets the standard for passwords that protect Example Labs accounts.
It covers AWS console and GitHub accounts.

2. Password requirements

Passwords must be hard to guess and must not contain the user's name.
Passwords must never be shared, sent by email or written down.
A forgotten password is reset through the IT service desk.

3. Password managers

Employees should use the company password manager to create and store passwords.
